

TripVault — Project Completion Report

CodGen Virtual Internship Program — Full Stack (MERN)
Duration: 4 Weeks | Submission: Final Week (Week 4)

1. Project Overview

TripVault is a full stack MERN web application that lets users register, log in, and document their travel memories. Users can create, edit, and delete trips, upload photos via Cloudinary, and share a public profile page that showcases their travel history — viewable by anyone, even without an account.

Live Demo: <https://tripvault-six.vercel.app/login>

GitHub Repository: *[Add your repo link here]*

2. Tech Stack

Layer	Technology
Frontend	React (Vite)
Backend	Node.js / Express
Database	MongoDB Atlas
Image Storage	Cloudinary
Frontend Hosting	Vercel
Backend Hosting	Render

3. Core Features

- **Authentication** — JWT-based register/login with protected routes
- **Trip CRUD** — create, read, update, and delete trips with ownership protection
- **Photo Uploads** — cloud-based image uploads with cover photos and photo grids
- **Public Profiles** — shareable trip pages, no login required to view
- **Responsive UI** — adapted layouts for mobile, tablet, and desktop
- **Live Deployment** — backend on Render, frontend on Vercel

4. Week 4 Deliverables Status

#	Deliverable	Status
1	Loading states (spinners/skeletons)	Done
2	Error handling on API failures	Done

3	Toast notifications (login, CRUD, upload)	Done
4	Empty states for lists	Done
5	Navbar with logo, links, logout	Done
6	Footer with name and GitHub link	Done
7	Consistent styling across pages	Done
8	Mobile responsive (375px+)	Done
9	Hamburger menu on mobile	Done
10	Backend deployed on Render	Done
11	Frontend deployed on Vercel	Done
12	End-to-end tested on live URLs	Done
13	Live URL added to GitHub repo/README	Done
14	Professional README completed	Done

Update any items above that are still pending before final submission.

5. Deployment Summary

- **Frontend:** Deployed to Vercel, root directory /client, environment variable VITE_API_URL pointing to the Render backend.
- **Backend:** Deployed to Render as a Web Service, root directory /server, start command node index.js, with MONGO_URI, JWT_SECRET, and Cloudinary keys set as environment variables.
- **Database:** MongoDB Atlas cluster configured to accept connections from anywhere (0.0.0.0/0).

6. Conclusion

Over four weeks, TripVault was built from the ground up — authentication, full CRUD functionality, cloud image handling, public sharing, responsive design, and a live production deployment. The application is fully functional end-to-end at the live URL above and is ready for submission as part of the CodGen Virtual Internship Program.
